                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Torano A., Putnam F.W.;

"Complete amino acid sequence of the alpha 2 heavy chai
"ga2 immunoglobulin of the A2m (2) allotype.";

Proc. Natl. Acad. Sci. U.S.A. 75:966-969(1978).

-!- MISCELLANEOUS: THE SEQUENCE OF THE ALPHA-2, A2M(2)

REGION OF THIS MYELOMA PROTEIN IS ALSO GIVEN.

-!- SIMILARITY: Contains 1 immunoglobulin-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HV3T HUMAN

"Amino acid sequence of the Fv region of a human monoclonal IgM
(protein WEA) with antibody activity against 3,4-pyruvylated
galactose in Klebsiella polysaccharides K30 and K33.";

Proc. Natl. Acad. Sci. U.S.A. 80:4837-4841(1983).

-I MISCELLANEOUS: THIS CHAIN WAS OBTAINED FROM A MONOCLONAL ANTIBODY
ACAINST 3,4-PYRUVYLATED GALACTOSE AND ISOLATED FROM A PATIENT WITH
WALDENSTROM'S MACROGLOBULINEMIA.

-I- SIMILARITY: CONTAINS 1 immunoglobulin-like domain.
                                                                                                                                                                                                      "The primary structure of a monoclonal IgA-immunoglobulin (IgA Tr II. The amino acid sequence of the H-chain, alpha-type, subgroup structure of the complete IgA-molecule.",
Hoppe-Seyler's Z. Physiol. Chem. 356:1337-1342(1975).
-!- MISCELLANBOUS: THE SEQUENCE OF THE C REGION IS ALSO GIVEN.
-!- SIMILARITY. Contains 1 immunoglobulin-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pfam; PF00047; ig; 1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HPL) which are useful for the commetic control of body weight of human beings.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL #30 from llama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       userul for cosmetic control heavy chain variable domain of light chains

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human dietary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HFL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HFL inhibiting VHH fragment, HFL #15 from liama (camelid) species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid of light chains.

The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human dietary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HGL) which are useful for the cosmetic control of body weight of human beings.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New antibody or its fragments for inhibiting human dietary enzymes, useful for cosmetic control of body weight of human beings, comprises heavy chain variable domain derived from immunoglobulin naturally devoid

The patent discloses antibodies or their fragments comprising a heavy deviation domain (WHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human distary enzymes. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human distary enzymes especially human panoreatic lipsas (HPL) or human gastric lipsas (HGL) which are tweful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting WHH fragment, HPL #19 from land (camelid) species
                                                                                                                                                                                                                                                                                                                      61 DSVKGRFTISRDNDKATEYLQMANLKPEDTAVYYCNAQVRVRFSSDYTNYWGQGTQVTVS 120

The patent discloses antibodies or their fragments comprising a heavy chain variable domain (VHH) derived from an immunoglobulin naturally devoid of light chains specific for inhibiting human distary enzyméps. The antibodies of the invention are useful for the preparation of medicaments or food for inhibiting the activity of one or more human distary enzymes especially human pancreatic lipase (HPL) or human gastric lipase (HPL) which are useful for the cosmetic control of body weight of human beings. The present peptide sequence is HPL inhibiting VHH fragment, HPL HPL inhibiting VHH fragment, HPL HPL inhibiting VHH fragment,
